

American Sugar & Refining Baltimore Solar Array

**System Size: 35.36 kW DC
136 (260 Watt) Solar Modules**

A Corporate Wide Sustainability Commitment

By utilizing solar electricity, Domino Sugar is making a contribution towards creating a sustainable economy. This photovoltaic array will generate renewable electricity to offset the power used by the iconic Domino Sugar sign that lights the Baltimore Harbor each night.

- The multi-crystalline solar cell modules were manufactured by Motech in the U.S.
- The modules are held in place by an AET Rayport stainless steel roof mounting system
- Two SMA inverters convert the direct current (DC) generated from the sun's free fuel into alternating current (AC)
