### RER Energy Group Earns Position in Inc. Magazine's *Top 5000* for 2015

*150% growth over the last three years helped in placement on this year's list.*

**Reading, Pennsylvania – August 13, 2015.** RER Energy Group (RER) announced today that the company has been honored with a position in the 34<sup>th</sup> annual Inc. Magazine Top 5000 List of America's Fastest-Growing Private Companies in America for 2015.

"This is a great acknowledgement of our ongoing dedication to transparency, the education of our clients, and the hard work and commitment from each of the team members in the RER organization," said Jim Kurtz, President of RER Energy Group.

The 2015 Inc. 5000 list is ranked according to percentage revenue growth for the period 2011 to 2014. To qualify, companies must have been founded and generating revenue by March 31, 2011. They also had to be U.S.-based, privately held, for-profit, and independent—not subsidiaries or divisions of other companies—as of December 31, 2014.

Founded in 2009, RER Energy Group ranked #4090 on the Inc. 5000 list when compared with all companies participating throughout the United States.

"RER growth is exceeding even the lofty rates of the overall solar industry. Like many fast-growing enterprises featured in the Inc. 500 list, our trajectory continues to build momentum. As we track our results into 2015, we have grown revenue 150% over the last three years," Kurtz added. "We are fortunate to be part of the renewable energy industry, which has established itself as a real growth engine in our economy—generating attractive returns, significantly lowering energy costs, and providing long-term sustainability in the 21<sup>st</sup> century."

Empower Your World.

“Solar system costs have dropped an average of 60% over the last five years; we’re seeing a dramatic increase in companies taking advantage of this fact and the 30% federal tax credit, which is due to expire in 2016. We encourage companies that have been considering solar to put it at the top of their priority list. There is a perfect combination of economic incentives and low install costs for companies looking to maximize their ROI by making this wise, long-term investment.”
